Hardware

Smart-It

communication computation sensing computation

Sensor board

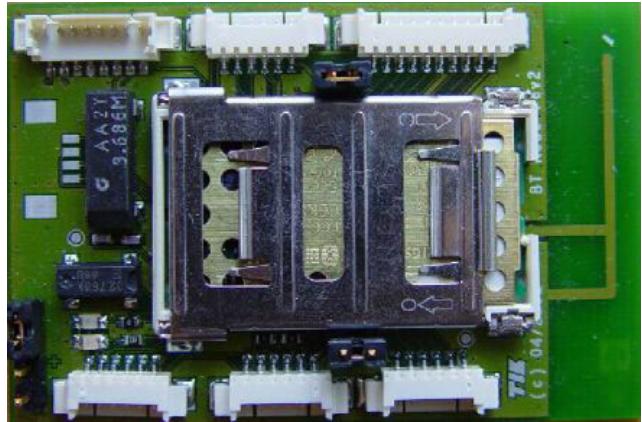

- temperature
- microphone
- 2-axis accelerometer
- pressure
- light
- microcontroller
- speaker
- LEDs

Smart-It sensor board (TecO)

Core board

- Bluetooth Smart-It
 - 8-bit microcontroller,
8 MHz/ 8 MIPS
 - 64 Kbyte RAM
50 Kbyte EEPROM
128Kbyte FlashROM
 - Bluetooth radio
 - Antenna on PCB
 - Input/ Output
 - sensor board
 - analog in, UART, ext
interrupts, programming

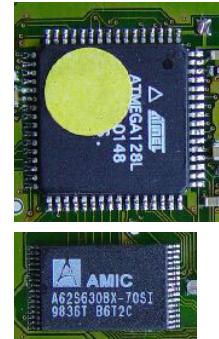

Bluetooth Smart-It (ETH Zurich)

Core board

■ Bluetooth Smart-It

- 8-bit microcontroller,
8 MHz/ 8 MIPS
- 64 Kbyte RAM
50 Kbyte EEPROM
128Kbyte FlashROM
- Bluetooth radio
- Antenna on PCB
- Input/ Output
 - sensor board
 - analog in, UART, ext
inerrupts, programming

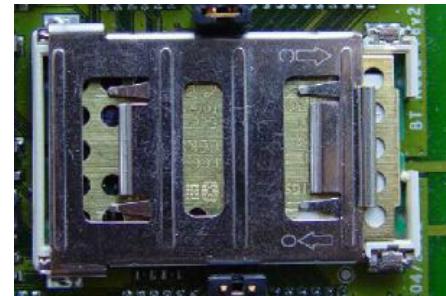

Bluetooth Smart-It (ETH Zurich)

Core board

■ Bluetooth Smart-It

- 8-bit microcontroller,
8 MHz/ 8 MIPS
- 64 Kbyte RAM
50 Kbyte EEPROM
128Kbyte FlashROM
- Bluetooth radio
- Antenna on PCB
- Input/ Output
 - sensor board
 - analog in, UART, ext
interrupts, programming

Bluetooth Smart-It (ETH Zurich)

Core board

■ Bluetooth Smart-It

- 8-bit microcontroller,
8 MHz/ 8 MIPS
- 64 Kbyte RAM
50 Kbyte EEPROM
128Kbyte FlashROM
- Bluetooth radio
- Antenna on PCB
- Input/ Output
 - sensor board
 - analog in, UART, ext
inerrupts, programming

Bluetooth Smart-It (ETH Zurich)

Core board

■ Bluetooth Smart-It

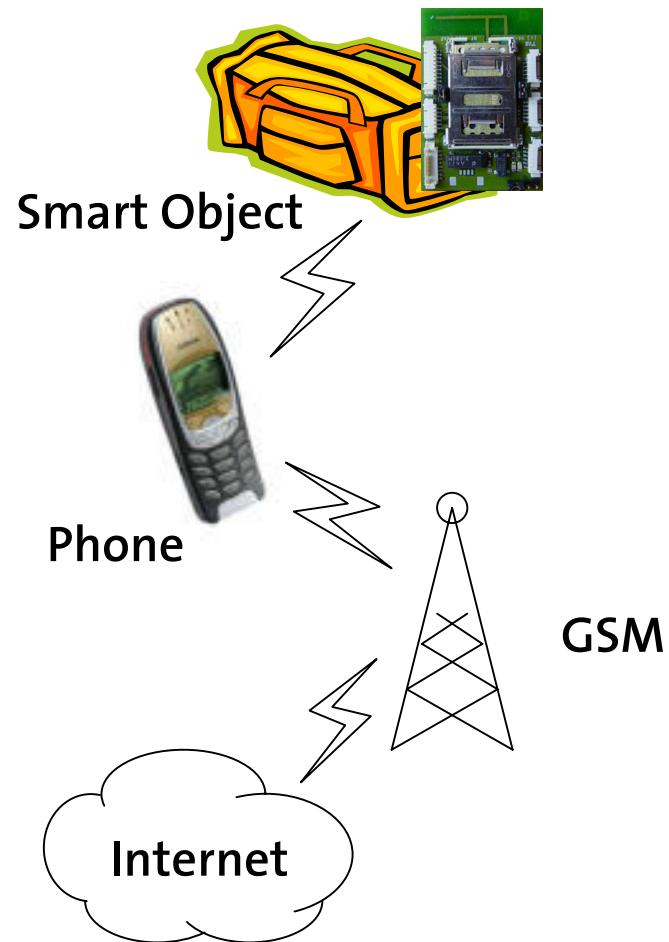

- 8-bit microcontroller,
8 MHz/ 8 MIPS
- 64 Kbyte RAM
50 Kbyte EEPROM
128Kbyte FlashROM
- Bluetooth radio
- Antenna on PCB
- Input/ Output
 - sensor board
 - analog in, UART, ext
interrupts, programming

Bluetooth Smart-It (ETH Zurich)

Connect the World

- other smart objects or infrastructure
- Bluetooth phone
 - send/ receive SMS
 - access Address book
 - connect to Internet
- PDA (iPAQ), camera, printer,...

Programming

- in C with GNU gcc cross compiler
 - straightforward
 - malloc () and printf () (to serial port)
- compile, upload, (run)
 - in-system programmable
- system software (library)
 - drivers: UART, RTC, Bluetooth, ...
 - event driven programming model

Status

- production
 - 200 pieces for project partners now
- can I have them?
 - no DIY (you will need to have them made)
 - design documents on the Web
 - <http://www.tik.ethz.ch/~beutel/>
 - ~ 200: 120€ pp for core board
 - Bluetooth (50 €), microcontroller (12 €)
 - PCB, placement (high initial cost)

Power consumption

- core-board @ 8MHz/ 3.3 V

Bluetooth off	
idle	13 mW
active	40 mW
idle	
active	84 mW
idle	
active	191 mW

on typical phone battery (600mAh)
~ 1 week idle
~10 hours running

Bluetooth on

Thanks
