Summer School on Ubiquitous and Pervasive Computing

Motivation

- Location + mobile devices → Location-based services and Context-aware applications

- Need information about the user location;
- Information can be acquired using several tracking mechanisms;
- Generic location service - Open system, independent of the tracking mechanisms;

- Location is not enough

Motivation (cont)

- Besides location, other information may be useful:
  - Time of the day
  - Activity
  - Type of Place (urban area, room, garden or parking-place)

Solution?
